

A durable dishwasher is the sustainable choice. **Introducing ASKO DW60.**

ASKO DW60 is the world's most reliable and responsible dishwasher, and a benchmark when it comes to hygiene and sustainability. Designed and rigorously tested to the equivalent of 20 years' worth of regular use, the DW60 delivers superior cleaning and drying results year after year. It performs to the highest hygiene standards by eliminating 99.99999%* of bacteria, fungi, viruses and more.

Designed to perform and built to last, the ASKO DW60 cleans dishes, cutlery, glass and crockery, while caring for the world around it.

DW60 is designed responsibly to be enjoyed for 20 years.

At ASKO, the market-leading Scandinavian brand of premium kitchen, laundry and professional appliances built on a proud 70-year heritage, sustainability and responsibility go hand in hand. When new appliances are designed and produced at ASKO, they are made to last and to make things better – for the customers and for the planet. It was this approach that led ASKO to create its latest dishwasher: the ASKO DW60.

* UV Cleanse mode in combination with intensive or hygiene programs.
Tested against standard QB/T 5133-2017.

The new ASKO DW60 was designed and built with the long-term benefits of the user and the environment in mind— where eco-friendly innovations meet even the most demanding hygiene standards. **To help protect the environment, low energy and water consumption** combine with a special focus on the impact of detergent. This focus on sustainability is also reflected in ASKO's belief in building appliances with **more steel and less plastic**, and then testing them to **last for 20 years**. This unique approach has helped ASKO create a dishwasher that is cleaner and healthier for the user, kinder to the environment, and which performs better for longer – saving people time, energy and money. ASKO's dedication to superior quality and a great user experience, has helped them create an extensive range of innovative professional solutions that deliver superior cleaning and drying results, and provide a satisfying and trouble-free ownership experience.

DW60 protects your health and environment.

ASKO focus on creating products that not only care for people's belongings, but which also have a positive impact on people's health and wellbeing as well as the environment.

With its range of unique and innovative new features and functions, the DW60 is another exciting step forward in ASKO's mission to combine the highest hygiene standards with low energy, water and detergent consumption. Not only does this reduce the appliance's overall impact on the environment, it can also improve the wellbeing of the user while delivering healthier, more hygienic results and a superior clean.

The **highest hygiene standards** are met thanks to the ASKO innovation **UV Cleanse mode™** for unbeatably clean results and valuable peace of mind for people concerned about their health. It is unique to the ASKO DW60 series of dishwashers. Using UV light, it eliminates up to 99.99999%* of bacteria, fungi and viruses that can find their way onto your dishes and into your dishwasher. The result is a market leading reduction of different microbes and extremely clean dishes, even when using a low temperature program such as ECO program. This means the highest level of cleanliness and hygiene can be achieved while simultaneously saving energy.

Additionally, a special **Hygiene program for disinfection** can be used in situations where hygiene demands are especially high. A clean appliance is also extremely important for proper hygiene. This is ensured by the **Self-cleaning program**, which sterilises the tank and the entire water circulation system. The **Anti-odour function** eliminates bad odours in the tubes and the tank caused by dirty dishes that have been left in the dishwasher for too long. Different features attribute to a safer, cleaner environment without compromising the user's health or the cleaning results. **Energy and water savings** are made possible thanks to the adaptive **Green mode**, which measures the dirtiness of the load and then calculates the right temperature and right amount of water required. Some programs can even run at lower temperature for cleaning dishes that are only slightly dirty. In this way, as little as **7.5 litres of water** are used in a washing cycle – including two rinses with fresh water. The ASKO DW60 has a direct supply of fresh water and is adapted to **different sources of heating** such as district heating, solar or geothermal power as well as heating by oil, gas or electricity. This way hot or cold water can be used in the washing cycle.

The **energy consumption** is reduced thanks to the highly efficient and durable **brushless BLDC motor** and the **new filter system** that allows better water flow. With the variable water pressure, the BLDC motor delivers other benefits such as lower noise levels and optimized cleaning performance. Energy is also saved thanks to the smart **Heat Exchanger System** – an energy saving device that enables a “B” rating in energy in EU (without it, it would be “C”). Heat, generated by the dishwasher, combines with the ambient temperature of the room to heat up a full tank of water. This hot water is then used at various stages of the cleaning process, saving energy that would normally be used to heat water supplied by a cold inlet.

* UV Cleanse mode in combination with intensive or hygiene programs.
Tested against standard QB/T 5133-2017.

The DW60 also focuses on the impact of **detergent** on the environment. Through years of research, ASKO has identified the exact amount of detergent needed to deliver consistently perfect cleaning results. This research has resulted in the new **Auto Dose integrated auto dosing system**. With Auto Dose, the dishwasher adjusts the amount of detergent to suit the degree of soiling, the hardness of the water and the program type to avoid overdosing and minimize the environmental footprint. The auto dosing compartment stores up to 30 days' worth of detergent.

ASKO DW60 also features the **Aqua Safe™ system**. This multi-faceted water protection system provides peace of mind by preventing the machine from causing water damage to floors or more serious damage to the house.

DW60 saves time and money.

ASKO added **long life** to the DW60 to avoid wasting materials and to help people save money and spend their valuable time on other things. Developed and tested for a **20-year lifetime**, the DW60 is made of sturdy, durable materials that follows ASKO's philosophy of using **more steel and less plastic** in products. No other dishwasher in the market has so many **details in steel** instead of plastic. The **8 Steel™ concept** ensures that all parts that come into contact with water, the inner part of the door and the container are all made of non-magnetic acid proof 1.4401/18.9 stainless steel. Even the **baskets** are made of nylon coated stainless steel, which make them extra sturdy and long-lasting. So, the DW60 won't rust.

Thanks to the **Super Cleaning System™**, time and water are saved as the dishes don't need to be rinsed before being loaded into the machine. The extremely precise **11 Spray™** system is carefully designed to reach every part of the dishwasher – no matter which program is used. This means the same superior cleaning results and high hygienic standards are delivered for all items inside the appliance. The main spray arms are made of high-quality, durable stainless steel, which guarantees a consistent spray for the lifetime of the machine. There is even a **Quick Pro program**, which helps save even more water, energy and time – without ever compromising on performance.

As well as delivering a superior, hygienic clean, safety for users, installers and service technicians are crucial for ASKO. This is why the new DW60 dishwasher is **easy to install and adjust** and has the **highest safety standards regarding water leakage and electricity**. It also features **four position fixation** to secure it firmly to the cabinet and prevent tilting.

DW60 delivers superior cleaning and drying results.

In ASKO products, the brand's Scandinavian roots are not only reflected in their clean and timeless design, but also by their **quality, efficiency** and **functionality**. ASKO cares about **satisfying and exceeding the users' expectations**, and by installing a wide range of **professional features** in its products, it gives users the best experience possible.

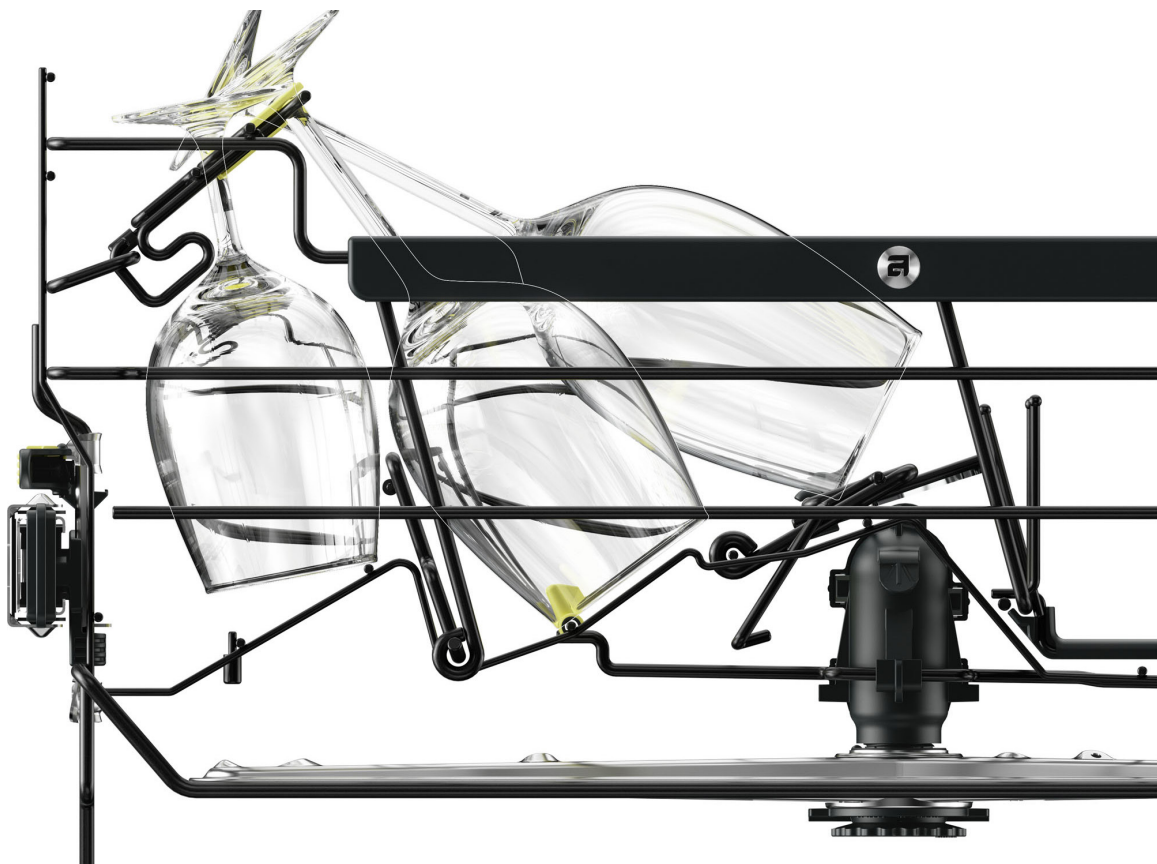

DW60 gives **superior cleaning and drying results** thanks to the various functions and innovations, which are the result of the ASKO teams' research. Extra power is added to the already powerful cleaning system by two **adaptable power zones** featuring 2-spray patterns – **Jet Spray™** and **Wide Spray™**. These spray patterns are set manually and produce either a concentrated high-water jet for extra dishwashing power when cleaning tall and narrow objects or a wide water shape for cleaning larger dishes. An extra bridging function allows the user to set both power zones to spray very large dishes or utensils.

Dishwashers are meant to do all the work for you, so it can be very inconvenient when they don't do it properly. So ASKO has developed two drying systems that deliver perfect drying results every time. **Turbo Combi Drying™ with sensor control** is ASKO's most advanced drying method. It ensures dishes are completely dry in the shortest possible time, while using the minimum amount of energy possible. The drying process is fast, safe and effective and doesn't leave water residue on dishes, glasses or cups.

With **Auto Door Open Drying™** you don't even have to wipe the dishes when unloading. This method is based on natural condensation and drying with the help of warm indoor air. The dishwasher automatically opens the door to finish drying the load with warm indoor air. As well as perfect drying results, both drying systems **minimise any moisture that** could cause damage to worktops or any surrounding furniture. They do this by evaporating and then recondensing the water before leading it to the bottom of the appliance – all before the door opens and the natural drying process begins.

Adaptable water pressure is based on the motor for the circulation pump that has variable rpm. So, different water pressures are possible for different programs. The lower one, for example, is used for the **Crystal Glass program** to ensure that sensitive glasses are not moved or tilted. The higher rpm/water pressure is used for the **Quick Pro program** to boost cleaning performance.

The cleaning power also depends on the **filter maintenance** and the hardness of the water. The new filter solution makes it easier to clean and maintain the filter and prevents larger particles from falling in, while the **integrated softener** prevents the build-up of limescale and other residue caused by hard water.

DW60 has more space for your stuff.

The DW60 has the world's tallest loading height and biggest load capacity, making it the most flexible dishwasher on the market. It literally has a place for everything that can be washed in a dishwasher.

The **loading height** of up to 58 cm (XXL dishwashers) or 54 cm (XL dishwashers) means that even the largest and most awkward items can be fitted in – plus there is plenty of clearance room for tall wine glasses, large platters and more. DW60 has room for **17 place settings**, which is the equivalent of around **180 individual items** that can be cleaned and dried perfectly.

Thanks to the **Flexi Racks™** system and **4 detachable baskets**, DW60 has a **world-leading loading flexibility**. This is made possible by the foldable/divisible pin rows, height adjustable racks and other handy solutions such as the **Instant Lift™ levers** for easy basket removal – combined they provide an almost endless assortment of smart loading configurations.

Based on **nylon coated steel** for maximum longevity, the smart four basket system is durable, practical and easy to use. The exclusive **easy detachable Top cutlery basket** with ball bearing guide rails is easy to remove and carry to a kitchen drawer for unloading. The **Premium upper basket** has new height adjustable cup shelves, improved vertical clearance and rubber fixings for wine glasses to provide sturdier support and reduce the risk of damage. It has 5 rows for glasses and divisible pin rows for plates. It also features variable rack spacing for bowls and an integrated knife holder. The **Middle basket** has improved cleaning performance thanks to the increased mechanical action and water pressure in the integrated spray system. It also has two removeable inserts. The **Exclusive lower basket** features foldable plate racks and an optimized vase/bottle holder.

The capacity and flexibility of the new DW60 means more can be fitted into a single load, so it doesn't have to be used as often as other dishwashers. This saves water, energy, time and money.

Scandinavian **attention to detail** is reflected in the machine's harmonized interior. All components come in a dark grey. But for improved visibility and guidance, some parts are accented with a bright yellow-green colour.

The improved **interior LED lighting system** is now brighter to simplify loading and unloading and to illuminate the DW60's amazing interior.

DW60 stays connected to you everywhere.

To be even more **user friendly**, the DW60 features an elegant, intuitive and easy to use **touch interface**, while the **ConnectLife app** lets users control and monitor the ASKO DW60 remotely via a smartphone or tablet. With the ConnectLife app you can look up the online user manual, change settings, check the machine's status and more. You can even start, stop and pause programs when you're on the move. The app also includes a step-by-step guide to help you find the best programs for you, depending on what you're washing and how you prefer to wash it. DW60 is also equipped with a QR code inside the door, which provides easy access to the latest version of the user manual.

Selected ASKO DW60 dishwasher models were granted the iF DESIGN AWARD 2022, one of the world's most prestigious design awards.

A lot can change in 20 years, but one thing stays the same.
Your ASKO DW60 dishwasher.

It was developed responsibly. It was designed to make a difference.
It was built to be enjoyed for the next 20 years.

About ASKO Appliances.

The ASKO story started in the 1950s. A young farmer in Jung, south of Lidköping in Sweden, saw his mother's predicament: washing by hand is wet, cold, hard and heavy. He wished to ease her burden, so he invented his own machine – a sturdy, steady and reliable washer in cast iron and stainless steel. The beginning of ASKO was an act of love – no more, no less.

Today, ASKO is the market-leading Scandinavian brand of premium kitchen, laundry and professional appliances built on a proud 70-year heritage. ASKO products are developed by combining traditional craftsmanship, user-driven innovation and a passion for design. Since 1950, millions of professionals and home users on all continents have experienced the unique pleasure of ASKO appliances.

ASKO Philosophy.

The combination of everyday functionality, environmental concern and clean, pleasant lines is the principal hallmark of Scandinavian design – and ASKO. The fundamental idea is that carefully designed products should improve people's quality of life. To distinguish itself in a world of unnecessary and overly complex designs, ASKO aims for a soft, human-centric minimalism based on the principle of quiet being the new loud.
